S & E DESIGNS / CUSTOMER QUICK START

Build Your Gang Sheet

Upload it. Size it. Arrange it. Check it.

A gang sheet holds several designs on one sheet of transfer film. Follow these steps to prepare your layout.

1 Choose your sheet

On our Build a Gang Sheet page, choose your sheet size and select Open Gang Sheet Builder. Start a new sheet; check the artboard size before adding designs.

Watch: start & sheet size · 0:33

2 Upload your artwork

Select Upload Images and choose files from your device. Review any background warning. Keep only backgrounds you intend to print; inspect the result after any removal.

Watch: upload & backgrounds · 5:42

3 Set the printed size

Click an uploaded image to add it. Enter its width or height at the intended print size. Keep the aspect ratio locked to avoid stretching your design.

Watch: sizing controls · 6:45

4 Make the copies you need

Set the image quantity, then use Duplicate Image for repeated designs. Autofill Sheet fills available space with the selected design. Review the resulting counts.

Watch: copies & autofill · 8:46

5 Arrange & align

Leave cutting space between designs. Auto Nest rearranges artwork to use space more efficiently. In Settings, turn Snap when moving on for alignment guides, or off for free movement.

Watch: Auto Nest · 9:26

6 Review before ordering

Check every design at its final size: dimensions, copies, backgrounds, overlaps and sheet edges. Resolve low-resolution warnings, then follow the builder's on-screen completion steps.

Watch: resolution & overlap · 4:55

Before you finish

Use sharp artwork at the size you will print. Aim for 300 DPI. Keep resolution and overlap warnings visible. Check transparency against a contrasting artboard background.

Count twice: image quantity means copies within a sheet; sheet quantity means copies of the complete layout.

Watch: snapping & alignment · 0:55
